SKILLED CARE & REHABILITATION SERVICES

We believe in keeping your rehab moving in the right direction

Rehab can often seem like an intimidating challenge, filled with unknowns and uncertainties. At Covenant Living Communities & Services we offer the highest level of care during your short-term rehab stay at one of our communities. You'll see and feel the difference in everything we do, from the minute you arrive to the time of your discharge. Our working relationships with community-based home care services ensure that you continue to experience successful results when you return home.

Since everyone is different—and has unique rehab goals—we approach therapy on an individual basis, working closely with you to develop a rehab program specifically suited to your needs. Our rehabilitative services team delivers exceptional speech, physical and occupational therapy, as well as outstanding nursing and discharge support. At every step along the way, we'll treat you like a person, not a patient.

Uncommon care for treating infections

Surgery can leave your body in a weakened state, making it more susceptible to infections. Overuse of antibiotics is linked to infections such as Clostridium (C. Diff) and Methicillin-Resistant Staphylococcus Aureus (MRSA). Cases of MRSA can occur in wounds, cuts or scrapes. Resistance to antibiotics and drug treatment is also related to bacterial pneumonia. For severe strains of pneumonia, oxygen therapy is used to increase blood-oxygen levels.

Keeping infectious disease at bay depends on carefully monitoring your condition, as well as properly administering medications. We're here with the experience and expertise necessary to provide the treatment that will work best for you.

Our goal is to help you achieve your rehab goals

- ✓ We'll design therapeutic programs specifically tailored to your medical condition—as well as your physical condition—customizing your therapy process by utilizing various equipment that may include the NuStep®, weights, ultrasound and electronic stimulation, Omnicycle®, VitalStim®, parallel bars and standing frame. The goal is for you to reach your highest potential. Programs will also be tailored to address cognitive and swallowing impairments.
- ✓ We'll provide the necessary information regarding medication management and, with the assistance of the entire rehab team, ensure the proper handling and dosages of all medications.
- ✓ Education is crucial to the rehab process. That's why we'll provide you and your family with a clear understanding of your condition and your subsequent therapy.
- ✓ Therapy will include regulating your diet, as well as monitoring your blood sugar levels and your blood pressure. In fact, close monitoring of your progress is essential—as well as keeping a vigilant watch for potentially troublesome signs and symptoms. Stress management is also a key factor to keep you on the right course.
- ✓ We'll make recommendations concerning modifications in your home, determining the types of adaptive equipment that will provide you with the highest level of independence.
- ✓ When it's time for you to return home, we'll utilize a collaborative approach by the entire team to ensure a smooth, successful discharge.
- ✓ Our priority is getting you safely home as soon as possible by using the most effective and efficient rehab strategy.
